

## General Information

H-Trace Battery is a modern battery rear light suitable for mounting on a carrier with 50mm mounting hole spacing. As light source H-Trace uses 2 red LEDs. The unit is powered by 2 AA / 1,5V batteries.

Should one of the LEDs fail, the whole rear light unit must be replaced.

## Mounting instructions

**Alignment:** Assemble the rear light so that the reference axis is aligned parallel to the road and the length axis of the bicycle.

**Mounting height:** According to German law (§67 StVZO), the rear light must be mounted at a height of 250-1200mm.

Please note that the unit must not be covered. The light must also be clearly visible from the sides.

## Operation

The ON/OFF switch is located under the unit.

## Replacing batteries

There is a low-battery indicator located behind the window on the top side of the unit. A yellow light signals that batteries need to be replaced.

To replace the batteries, first open the screw on the side of the rear light, then remove the light unit from the mounting plate which stays attached to the carrier. Please use only batteries of type AA / 1,5V. Battery type info is marked inside the unit and is visible when the cover is removed. Please note the correct polarity of the batteries marked with “+” and “-” signs.
