

## NUCORE NEWS

The Nucore grip series has received TÜV Austria's OK Biobased 2-star certification, which is awarded to products that contain between 40 – 60% biobased content. The certification uses carbon-dating (C14 analysis) to rate products from 1 to 4 stars. Nucore grips feature an outer layer made from 60% biobased TPE. Considering all the components in the grip, the overall biobased content is around 50% – placing Nucore in the 2-star category of 40-60% biobased content.

### NEW LEAF MARKING HIGHLIGHTS BIOBASED CONTENT

To support bike producers and consumers to make clearer choices, Herrmans is introducing a new marking system for biobased content. Four leaf icons indicate the proportion of renewable material – more filled leaves mean higher content.

Nucore grips are certified with the 2-star OK Biobased mark, which is represented with two filled leaves. Other products and components will follow, using one or more filled leaves to explain their material level.

This is Herrmans' own transparent way to highlight material progress and help customers compare environmental value across products.

### COMING SOON: SOFTER MATERIAL FOR TRAIL AND TOUR FROM 2026

We've listened to user feedback, and now introduce a softer compound for Nucore Trail and Tour grips. The round and mini-wing grips will feel even more comfortable to use also without gloves, while still maintaining the same great look and excellent grip. Scheduled for roll-out in Q1 2026.

## ALL BLACK CHAINGUARDS NOW IN RECYCLED MATERIAL

In our latest step toward greener cycling, we are transitioning three more of our chainguard models to 100% recycled plastic.

This shift reduces the carbon footprint of these products by up to 90%, while maintaining the same premium quality, look and durability that our customers trust.

**The updated chainguard models include the black models of Halo, Slim and Slyde** (including tailpieces).

In addition we offer Chainguard Fuse and a spoke protector in recycled plastic.

### NORDIC CARRIER SERIES COMPLETED

WITH AND WITHOUT BRAKE LIGHT FUNCTION, SMOOTH AND ELEGANT LOOK

**Nordic Carrier** is our latest rear light series for carrier integration, now available both with and without brake light function. Made for the same carrier model as our popular **H-Cargo** rear light. The housing is made of **100% recycled plastic**, to bring the carbon footprint down.

Nordic Carrier comes with a 5-cd light output. Wide side visibility guarantees the rider is seen in every condition.

The Nordic Carrier Plus model in addition features a 60-cd sensor-controlled brake light. When braking abruptly, the emergency brake light function will activate with a blinking light.

Designed with a modern Industrial look, the lights match the Nordic front light series and fit well with the design trends in the bicycle market today.

Approvals: Nordic Carrier: France and Germany, Nordic Carrier Plus: Germany.

### TOP MOUNTED VERSIONS OF NORDIC MR9, MR10, MR10+

Herrmans' popular MR series in the Nordic range is now completed with top mounted versions of models MR9, MR10 and MR10+.

The lights feature the appreciated design language in the Nordic series, and the top mounted brackets enable even more mounting flexibility.

#### Light output specs:

- MR9: 60 lx, 190 lm (e-bike), 50lx, 180 lm (dynamo)
- MR10: 90 lx, 240 lm (e-bike)
- MR10+: low beam 90 lx, 240 lm,  
high beam 120 lx, 450 lm (e-bike)

Approvals: MR9 and MR10: France and Germany.  
MR10+: Germany.
